

Ferrari Dental Care

Porcelain veneers can be used to whiten stained teeth or discoloured fillings, rebuild and reshape worn down teeth, or fill in small gaps in-between teeth.

Veneers are thin, semi-translucent porcelain shells that are custom made to fit your teeth.

They are permanently bonded using a resin to the front of the tooth.

Veneers are very strong and durable. When compared with using composite resin (plastic) for this type of treatment, porcelain veneers are much more colour stable.

Veneers are also colour matched to your teeth making the look very natural. It takes two visits for the veneers to be completed.

At the first visit we prepare the teeth by trimming and shaping the front of each tooth.

At the second visit we fit the veneers and bond them onto the front of each tooth.

Before

Six veneers have also been placed on these top front teeth.
